

# p2w poker

The relative odds according to calculations are: Losing cards= Outs/Winning cards  
38:10, which is 3:8:1. Another shortcut for calculating poker odds is, that there are 0 outs when the flop is dealt, Which means you have a 104= 40% chance of winning  
what's already in the middle. If the amount needed to call is small with respect to the current pot-size it is often said that we're getting a good price on the call. Price - Poker Definition
