&lt;p&gt;PART 3&lt;/p&gt;

&lt;p&gt;Using the outs to calculate Texas Hold em poker odds&lt;/p&gt;

&lt;p&gt;Let s break this down:&lt;/p&gt;

&lt;p&gt;We have already determined that you have nine &#128276; outs .&lt;/p&

gt;

&lt;p&gt;There are 52 cards in a deck and two of those are in your hand, leaving

50.&lt;/p&gt;

&lt;p&gt;There are four cards &#128276; exposed from the flop and turn, leaving

46 cards.&lt;/p&gt;

&lt;p&gt;Your opponent is holding two cards, but we ignore those as our &#128276;

; calculations in online Texas Hold em poker are only based on the cards you ca

n see and what could be left &#128276; in the deck.&lt;/p&gt;

&lt;p&gt;First calculate how many cards from the deck you can t see:&lt;/p&gt;

&lt;p&gt;52 Cards in a deck 2 Cards &#128276; in your hand 4 Cards dealt in

the flop and turn = 46 Unseen cards&lt;/p&gt;

&lt;p&gt;\*Still ignoring what your opponent &#128276; may be holding&lt;/p&gt;

&lt;p&gt;The unseen cards are then split into winners and losers:&lt;/p&gt;

&lt;p&gt;LOSERS 37 cards in the deck that will cause &#128276; you to lose Club

s Diamonds Spades WINNERS 9 cards in the deck that will give you a win&lt;/p&gt;

&lt;p&gt;YOUR ODDS 37 &#128276; to 9 Your odds of getting the winning flush Thi

s simplifies down to 4:1 (or 20% for those that like &#128276; to use percentag) Tj T\* BT

&#128276; win it.&lt;/p&gt;

&lt;p&gt;Common poker outs scenarios&lt;/p&gt;

&lt;p&gt;To help you get to grips with the idea of poker outs, we ve provided th

e outs &#128276; and odds on some common scenarios you re likely to see at the

table. Use this simple odds chart for calculating &#128276; odds and probabilit

ies while playing, especially when you are drawing and hoping to improve your ha

nd.&lt;/p&gt;

&lt;p&gt;It has basic hand odds &#128276; given the number of outs after the

flop or after the turn. These outs represent the cards you need to &#128276;

hit to make a better hand, such as turning a pair into three-of-a-kind, or filli

ng a straight draw. You ll notice &#128276; there s a big difference between ha

ving just one card to come, and two. For the example above the flush &#128276;

draw your chances go up to 35% from 20% if you have both turn and river to c

ome.&lt;/p&gt;
