video poker joker

```
<p&gt;Collin Moshman said:&lt;/p&gt;
<p&gt;Most important questions here are:&lt;/p&gt;
<p&gt;** What was your stack size and&lt;/p&gt;
<p&gt; your opponent&#39;s stack?&lt;/p&gt;
<p&gt;** Were there a lot £, of much shorter
<p&gt;** Was it the stone&lt;/p&gt;
                                  of much shorter stacks?</p&gt;
<p&gt; bubble or how many to go before ITM?&lt;/p&gt;
<p&gt;** How many buy-ins was £, a min-cash? While poker&lt;/p&gt;
<p&gt; players often say &quot;lt depends&quot; in response to hand questions
, this one really does</p&gt;
<p&gt; depend on £, a couple of key factorsMost important questions here are
:** What was your&It;/p&qt;
<p&gt; stack size and your opponent&#39;s stack?** Were there £, a lot of mu
ch shorter stacks?** Was</p&gt;
<p&gt; it the stone bubble or how many to go before ITM?** How many £, buy-i
ns was a min-cash?</p&gt;
<p&gt; Click to expand...&lt;/p&gt;
<p&gt;As Collin Moshman say, &quot;it depends&quot;. But with that being said
there</p&gt;
<p&gt; are very £, few normal situations, where its correct to fold AQ again
st a SB open jam. If&It;/p&qt;
<p&gt; you play this tight, SB £, can literally print money by jamming any t
wo cards against you.</p&gt;
<p&gt; But rather than just saying &quot;it depends&quot;, lets create £, a
scenario in ICMizer and see,</p&gt;
<p&gt; what kind of range we are actually supposed to call with.* Tournament
27 paid £, on 888</p&gt;
<p&gt; Poker* 28 players left on 4 tables* Hero is BB with 15BB* Everyone els
e at Hero table</p&gt;
<p&gt; has £, 20BB* Tournament average is 20BB but with a random distribution
n at the other</p&gt;
&It;p&qt; tables* It folds to SB, who jam £, on HeroWith these variables SB is
supposed to jam any</p&gt;
<p&gt; two cards, and Hero is supposed to call 17%. The £, exact range is 55
+, A8o+, KTo+, A5s+,</p&gt;
<p&gt; K9s, QJs. If Hero fold AQo, he is only defending 5,7% of the £, time
or around 1/3 as</p&gt;
<p&gt; often, as he should. We do want to consider the option though, that Vi
llain might £ , not</p&gt;
<p&qt; be jamming 100%, as he is supposed to. But even if Villain is only jam
ming 50% and then</p&gt;
<p&gt; folding £, or limping the other 50%, Hero is still supposed to call 8
8+, AJ+ and ATs. So</p&gt;
<p&gt; folding AQ would be £, a very big deviation, which required a rather
extreme read.</p&gt;
```
